PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 09/740,040	Applicant(s) ZOMBEK ET AL.	
	Examiner AVI GOLD	Art Unit 2457	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 20 May 2010.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1 and 3-54 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1 and 3-54 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

This action is responsive to the RCE amendment filed on May 20, 2010. Claims 1 and 48 were amended. Claims 1 and 3-54 are pending.

Response to Amendment

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 3-10, 15, and 17-54 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dunlop et al., U.S. Patent No. 6,721,872, further in view of Schuster et al., U.S. Patent No. 6,785,261, further in view of Fujimori et al., U.S. Patent No. 5,825,752.

As to claims 1 and 48, Dunlop teaches a messaging system, messaging method, comprising:

a client device (col. 2, lines 39-41, col. 3, lines 22-26);

a server (col. 2, lines 39-41, col. 3, lines 22-26);

a protocol gateway adaptively arranged between at least two of a plurality of communication networks each communicating said messages between said client

device and said server with a plurality of differing wireless network protocols, said protocol gateway communicated with an underlying wireless network protocol (col. 3, lines 14-34, col. 4, lines 5-21, Dunlop teaches the use of a reconfigurable network interface architecture including a device to support/encapsulate multiple network operating protocols, wireless LAN, and an OSI protocol stack).

Dunlop fails to teach the limitation further including segmenting a message communicated into multiple segments.

However, Schuster teaches a message divided into data packets and those packets including a packet/protocol header that encapsulates them (col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Dunlop in view of Schuster to segment a message communicated into multiple segments. One would be motivated to do so because it minimizes transmission latency.

Dunlop also fails to teach the limitation further including providing Transmission Control Protocol (TCP) functionality to data transferred communicated with a connectionless protocol through a layer of a peer protocol working in coordination with said connectionless protocol.

However, Fujimori teaches a peer to peer transmission method that is connectionless but has an ACK/retry function included (col. 10, lines 10-14).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Dunlop in view of Fujimori to provide Transmission Control Protocol

(TCP) functionality to data transferred communicated with a connectionless protocol through a layer of a peer protocol working in coordination with said connectionless protocol. One would be motivated to do so because it allows for reliable data transfer.

Regarding claims 3 and 50, Dunlop teaches the messaging system and method according to claims 1 and 48, wherein said underlying wireless network protocol is comprised of a protocol stack that comprises:

- an application layer mapped to layer 7 of said OSI model;
- a network layer mapped to layer 3 of said OSI model;
- a data link layer mapped to layer 2 of said OSI model; and
- a physical layer mapped to layer 1 of said OSI model (col. 4, lines 5-21, Dunlop discloses a protocol stack of layers used).

Regarding claims 4, 41, and 51, Dunlop teaches the messaging system and method according to claims 3, 23, and 50, wherein:

- said application layer comprises an interface between a client application and a simple network transport layer (SNTL); and

- said client application is adapted to send and receive messages across said plurality of wireless networks without having any information of a communication implementation (col. 4, lines 5-21, col. 5, line 60 – col. 6, line 10).

Regarding claims 5, and 52, Dunlop teaches the messaging system and method according to claims 4, and 41, wherein:

said client application is selected from a group consisting of one or more e-mail applications, one or more file transfer applications, and a plurality of end user applications (Dunlop, col. 4, lines 5-21, col. 5, line 60 – col. 6, line 10; Schuster, col. 15, lines 36-43).

Regarding claims 6, and 53, Dunlop teaches the messaging system and method according to claims 4, and 50, wherein:

said network layer comprises means for providing network protocol layer functionality and hiding the details of said functionality from a simple network transport layer (SNTL) (col. 4, lines 5-21).

Regarding claims 7, and 54, Dunlop teaches the messaging system and method according to claims 6, and 53, wherein:

said network layer comprises an Internet Protocol (IP) (col. 4, lines 5-21).

Regarding claim 8, Dunlop teaches the messaging system according to claim 3, wherein:

said data link layer and said physical layer are together adapted to comply with a public switch telephone network protocol (col. 3, lines 14-34, col. 4, lines 5-21).

Regarding claim 9, Dunlop teaches the messaging system according to claim 3, wherein:

said data link layer and said physical layer are together adapted to comply with a cellular digital packet data protocol (col. 3, lines 14-34, col. 4, lines 5-21).

Regarding claim 10, Dunlop teaches the messaging system according to claim 3, wherein:

said data link layer and said physical layer are together adapted to comply with a Mobitex protocol (col. 3, lines 14-34, col. 4, lines 5-21).

Regarding claim 15, Dunlop teaches the messaging system according to claim 3, wherein:

said data link layer and said physical layer are adapted to comply with said selected wireless network protocol (col. 3, lines 14-34, col. 4, lines 5-21).

Regarding claim 17, Dunlop teaches the messaging system according to claim 4, wherein:

said SNTL includes a connectionless UDP-like transport protocol having substantially all features and advantages of TCP (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 18, Dunlop teaches the messaging system according to claim 17, wherein:

said features are selected from a group comprising message segmentation, message segment reassembly, message retries, and message duplication (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 19, Dunlop teaches the messaging system according to claim 17, wherein:

said SNTL includes a transport header having a preselected width (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 20, Dunlop teaches the messaging system according to claim 19, wherein:

said preselected width comprises between four to six bytes (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 21, Dunlop teaches the messaging system according to claim 19, further comprising:

a single segment message header (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 22, Dunlop teaches the messaging system according to claim 19, further comprising:

a multiple segment message header (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 23, Dunlop teaches the messaging system according to claim 19, wherein said transport header further comprises:

a first field adapted to indicate a version number of a segment header;

a second field adapted to indicate a message identification value, adapted to discard segment/message duplications and to match acknowledgments with messages;

a third field adapted to indicate protocol information;

a fourth field adapted to indicate a total number of bytes contained in a message segment to be sent including said segment header; and

a fifth field adapted to indicate a number of each said message segment

(Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 24, Dunlop teaches the messaging system according to claim 23, wherein:

said first field comprises two bits (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 25, Dunlop teaches the messaging system according to claim 23, wherein:

said first field comprises bit 0 and bit 1 of a first word in said segment header (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 26, Dunlop teaches the messaging system according to claim 23, wherein:

said first field comprises a value of from 0 to 3 (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 27, Dunlop teaches the messaging system according to claim 23, wherein:

said second field comprises thirteen bits (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 28, Dunlop teaches the messaging system according to claim 23, wherein:

said second field comprises bits 2 through 14 of a first word in said segment header (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 29, Dunlop teaches the messaging system according to claim 23, wherein:

Art Unit: 2457

said second field comprises a value of from 0 to 8,192 (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 30, Dunlop teaches the messaging system according to claim 23, wherein:

said third field comprises five bits (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 31, Dunlop teaches the messaging system according to claim 23, wherein:

said third field comprises bits 15 through 19 of a first word in said segment header (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 32, Dunlop teaches the messaging system according to claim 23, wherein:

bit 19 of said third field comprises a value indicative of message segmentation (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 33, Dunlop teaches the messaging system according to claim 32, wherein:

bit 19 comprises a value of 0 when said message is not segmented (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 34, Dunlop teaches the messaging system according to claim 32, wherein:

bit 19 comprises a value of 1 when said message is segmented (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 35, Dunlop teaches the messaging system according to claim 23, wherein:

bit 16 of said third field comprises a value indicative of a message type (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 36, Dunlop teaches the messaging system according to claim 35, wherein:

bit 16 comprises a value of 0 when said message includes a positive acknowledgment (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 37, Dunlop teaches the messaging system according to claim 35, wherein:

bit 16 comprises a value of 1 when said message includes a negative acknowledgment (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 38, Dunlop teaches the messaging system according to claim 23, wherein:

bit 15 of said third field comprises a message indicator (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 39, Dunlop teaches the messaging system according to claim 38, wherein:

bit 15 comprises a value of 0 when said message is an application message (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 40, Dunlop teaches the messaging system according to claim 38, wherein:

bit 15 comprises a value of 1 when said message is a system message (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 41, Dunlop teaches the messaging system according to claim 23, wherein:

said fourth field comprises twelve bits (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 42, Dunlop teaches the messaging system according to claim 41, wherein:

said fourth field comprises bits 20 through 31 of a second word in said segment header (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 43, Dunlop teaches the messaging system according to claim 42, wherein:

said fourth field comprises a value of from 4 to 4,096 (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 44, Dunlop teaches the messaging system according to claim 23, wherein:

said fifth field comprises eight bits (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 45, Dunlop teaches the messaging system according to claim 44, wherein:

said fifth field comprises bits 0 through 7 of a third word in said segment header (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 46, Dunlop teaches the messaging system according to claim 44, wherein:

said fifth field comprises a value of from 2 to 255 (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 47, Dunlop teaches the messaging system according to claim 23, wherein:

said fifth field is adapted to re-order a plurality of message segments into a single complete message (Schuster, col. 1 line 63 – col. 2, line 7, col. 2, lines 49-65).

Regarding claim 49, Dunlop teaches the messaging system and method according to claim 48 wherein:

a simple network transport layer (SNTL) that maps to layer 4 of said OSI model (col. 3, lines 14-34, col. 4, lines 5-21).

3. Claims 11-14 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dunlop, Schuster, and Fujimori further in view of Meyer et al., U.S. Patent No. 6,778,099.

As to claim 11, Dunlop, Schuster, and Fujimori teach the method of claim 3.

Dunlop, Schuster, and Fujimori fail to teach the limitation further including wherein said data link layer and said physical layer are together adapted to comply with a RIM protocol.

However, Meyer teaches automatic equipment and systems for remote reading of utility meters via a wireless area network communications module (see abstract). Meyer teaches the use of a RIM protocol (col. 6, lines 17-20).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Dunlop, Schuster, and Fujimori in view of Meyer to use a RIM protocol. One would be motivated to do so because it allows for the use of more protocols to transfer data.

As to claim 12, Dunlop, Schuster, and Fujimori teach the method of claim 3.

Dunlop and Schuster fail to teach the limitation further including wherein said data link layer and said physical layer are together adapted to comply with an ARDIS protocol.

However, Meyer teaches the use of an ARDIS protocol (col. 6, lines 1-5).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Dunlop, Schuster, and Fujimori in view of Meyer to use an ARDIS protocol.

As to claim 13, Dunlop, Schuster, and Fujimori teach the method of claim 3.

Dunlop, Schuster, and Fujimori fail to teach the limitation further including wherein said data link layer and said physical layer are adapted to comply with a GPRS protocol.

However, Meyer teaches the use of other packet wireless data networks and packets transmitted and received over a radio modem (col. 6, lines 1-5, col. 7, lines 21-26).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Dunlop, Schuster, and Fujimori in view of Meyer to use a GPRS protocol.

As to claim 14, Dunlop, Schuster, and Fujimori teach the method of claim 3.

Dunlop, Schuster, and Fujimori fail to teach the limitation further including wherein said data link layer and said physical layer are adapted to comply with a GSM protocol.

However, Meyer teaches the use of a GSM protocol (col. 6, lines 1-5).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Dunlop, Schuster, and Fujimori in view of Meyer to use a GSM protocol.

As to claim 16, Dunlop, Schuster, and Fujimori teach the method of claim 3.

Dunlop, Schuster, and Fujimori fail to teach the limitation further including an ARDIS protocol, a RIM protocol, a GPRS protocol, and a GSM protocol.

However, Meyer teaches the use of an ARDIS protocol, a RIM protocol, a GPRS protocol, and a GSM protocol (col. 6, lines 1-5, 17-20; col. 7, lines 21-26).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Dunlop, Schuster, and Fujimori in view of Meyer to use an ARDIS protocol, a RIM protocol, a GPRS protocol, and a GSM protocol.

Response to Arguments

4. Applicant's arguments with respect to claims 1 and 3-54 have been considered but are moot in view of the new ground(s) of rejection. The Fujimori reference teaches the newly added limitation.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
